“After my stroke I never thought I would walk again. How wrong I was, having just walked up Ben Nevis! I have just now completed my personal Three Peaks Challenge.” HB

PhysioFunction have a specialist interest and expertise in rehabilitation technology. We have a wide range of equipment that can help promote rehabilitation outcomes and function. The use of technology may also assist in day to day activities which otherwise may not be possible. We ensure our clients receive the most clinically correct rehabilitation technology suited to their needs.

PhysioFunction are recognised as international experts in the use of Functional Electrical Stimulation (FES). FES stimulates nerves and activates weakened muscles to provide an aid to walking which assists with recovery and independent mobility.

Our physiotherapists have had great success in treating conditions such as:

- **Foot Drop**
  Avoid trips and falls using Functional Electrical Stimulation (FES) to lift your foot as you step
  Bioness L300, OttoBock MyGait, Pace and Walkaide

- **Poor or absent hand function**
  Assists the recovery of hand and arm function
  Saeboflex®, Saeboreach®, Bioness H200

- **Weak and paralysed muscles**
  Strengthens muscles or maintain muscle bulk in paralysed muscles with our affordable electrical stimulators

- **Tight muscles**
  Loosen tight muscles with our effective splinting solutions.

For more than ten years PhysioFunction have been helping people maximise their independence following life changing events such as a stroke, acquired brain or spinal cord injury and other neurological conditions. When other healthcare services have reached the limit of their time and resources we can often pick up the baton and help our clients continue their rehabilitation journey to reach their potential.

... And that potential is often greater than they initially thought possible.
Maximise independence

PhysioFunction works with its clients on a one to one basis, in clinics across the UK or in their own homes. Our aim is to help people to maximise their independence in everyday life. PhysioFunction believes in clinical excellence, quality of service and fairness in our dealings with clients. We also recognise and respect the work of medical professionals within the NHS and seek to build on the foundations they create.

Our team of highly trained specialist physiotherapists are experts in the treatment of all neurological conditions; they will provide one to one treatments specifically tailored to individual needs. We also offer a range of state of the art rehabilitation technology, much of which is not available from the NHS.

"Caring, friendly and always professional. We are delighted to be associated with PhysioFunction."
Lisa Tuner, Chief Executive Officer at Child Brain Injury Trust

Reach your goals

At the first face to face consultation we assess and create personal goals. PhysioFunction recognises that everybody’s goals are different. They can be anything from walking, driving to visit friends or family, returning to work or taking up sport again. PhysioFunction has even helped a client to achieve their aim of walking down the aisle!

Physiotherapy sessions are carried out by Neurological Physiotherapists. PhysioFunction can offer supervised gym sessions with a Physiotherapist or a Therapeutic Exercise Instructor individually or in a group exercise class. Appointments are usually available within five working days. A comprehensive assessment establishes individual needs and recommendations for future treatment. Following the initial assessment we can also advise whether there is a need to seek further assessments such as occupational or speech therapies.

Services

Our services include:
- Neurological Physiotherapy
- Rehabilitation Technology Services
- Seating posture & wheelchair assessments
